

DAEJEONG KIM

Tech Lead · Backend Engineer · AI Product Systems

marin.backend@gmail.com · github.com/Dae-Jeong · marinkim.xyz

I'm Daejeong Kim, a maker who turns possibilities into opportunities and delivers value through products.

EXPERIENCE

MediSolve AI

Apr 2025 - Present

Tech Lead · Backend Engineer / Full-time, early member

- Proposed Thready and led its development, launch, and operation as a paid subscription product with teammates in product planning, QA, and marketing. It helps creators already active on Instagram, YouTube, or blogs establish a presence on Threads despite limited time and unfamiliar platform conventions.
- Built and operated the product backend and AI generation and evaluation systems; implemented core user and admin workflows with coding agents.
- Separated product policy and records from AI execution in an independent service and database. Implemented a transactional outbox with leases, attempt tokens, retries, and version checks to control stale workers and duplicate or out-of-order delivery.
- Implemented scheduled draft generation and approval notifications, transactional approval commands, and publishing recovery that distinguishes pre-call failures from uncertain external results.
- Led order and inventory backend development and a Redis-based SSO session redesign for a dermatology operations product suite. Co-led real-time AI consultation backend development and implemented reservation policies and operational integrations.
- Led backend architecture and website and admin API development for multi-clinic operations and reservations.
- Implemented APIs, review workflows, and publication controls for a procedure-information knowledge service; preparing clinical evaluation materials and search-data release approval.
- Built the organization's standard backend template, enabling teammates across disciplines to implement features with coding agents. Led product planning, issue tracking, and releases; contributed to the design of AI-assisted company workflows and handled service deployment and routine cloud operations.

TheDayLabs

Feb 2025 - Apr 2025

Backend Engineer / Freelance, pre-incorporation engagement

- Built the initial dermatology CRM backend and established repository structure, development environments, documentation, and issue and pull-request conventions before MediSolve AI's incorporation. Joined MediSolve AI full-time in April 2025.

Memento AI

Oct 2024 - Jan 2025

Backend Engineer / Intern to full-time; company closed

- Built reservation and payment APIs, including payment authorization and capture, cancellation and refunds after reservation failures, and refund-triggered loyalty-point restoration and pass removal.
- Implemented immediate and scheduled multilingual follow-up surveys through messaging and email, with cancellation, rescheduling, and delivery history.

STUDIO LAB

Dec 2021 - Jan 2024

Vision AI Engineer / Product Manager / Backend Engineer / Full-time

- **Vision AI Engineer (Dec 2021 - Sep 2022):** Contributed to apparel-image analysis model development for SellerCanvas.
- **Product Manager (Oct 2022 - Sep 2023):** Led SellerCanvas from prototype to v1.0, defining product workflows, feature scope, and release priorities.
- Translated business requirements into technical specifications for enterprise fashion-brand PoCs, coordinating scope, schedules, and technical validation.
- Redesigned the product-page creation workflow and contributed to the related patent, METHOD FOR DISPLAYING PAGE.
- **Backend Engineer (Oct 2023 - Jan 2024):** Transitioned into backend development.

Izsol

Aug 2020 - Jun 2021

Vision AI Engineer / Intern

- Contributed to a facial-recognition-based automated attendance system.

PROJECTS

TellingMe

Jan 2024 - Dec 2024

Backend & Infrastructure Lead / Personal project

- Led Spring Boot backend development and AWS deployment and monitoring. Used Java, Spring, and Spring Boot across three side projects.

TECHNICAL SKILLS

Backend: Python, FastAPI, SQLAlchemy 2.0 async, PostgreSQL, MySQL, Redis, TypeScript, NestJS, RabbitMQ, TaskIQ

AI / LLM: LangGraph, LLM integration and evaluation, speech-to-text

Frontend: Next.js, TypeScript - core user and admin workflows

Engineering Tools: Claude Code, Codex, pytest, Ruff, Pyright, Docker, GitHub Actions, Sentry, Jira

Additional: Java, Spring, Spring Boot (side projects); Azure, AWS, Terraform, Vercel (deployment, environment setup, routine operations)

MILITARY SERVICE

Republic of Korea Army · III Corps

Aug 2017 - May 2019

Radio Communications Operator / Discharged as Sergeant

- Set up, operated, and maintained military radio communications infrastructure. Assigned wartime duties included antenna installation and communications-node operation to establish and sustain military communications networks.
- Completed full-term military service.

EDUCATION

Woosong University

Mar 2016 - Aug 2021

Game Multimedia major / Graduated

PATENTS, AWARDS & CERTIFICATIONS

- **Registered patent:** METHOD FOR DISPLAYING PAGE, Korean registration No. 10-2898273. Contributed to the product-page creation workflow design.
- **CES 2024 Best of Innovation, Artificial Intelligence:** Contributed to the award-winning SellerCanvas product.
- **KCL AI accuracy certification:** Contributed to a product that passed certification by Korea Conformity Laboratories.
- **ADsP:** Advanced Data Analytics Semi-Professional, September 2021.

ADDITIONAL ACTIVITIES

- **OSS Developer Partnership (Sep 2026):** Received and accepted an invitation to an external LLM API platform's developer partner program after the team discovered my public GitHub work.
- **UX Consulting:** Proposed hypotheses and interface improvements to make reward points easier to understand and encourage repeat visits. The changes were adopted alongside other product improvements and contributed to ranking and daily-active-user growth.
- **UX Study:** Presented improvements to Speak's post-lesson recommendation flow and was selected as MVP of IPS cohort 12. Also analyzed and presented UX principles using YouTube Music.
